

Daily Study Hours

Distribution of Daily Study Hours

Mean = 4.17 | Median = 4.12562356750841 | SD = 2

Red dashed line = mean

Study Hours — Box Plot

Median, IQR, whiskers, and outliers

Exam Score Distribution

Distribution of Exam Scores

Mean = 89.14 | Median = 93 | SD = 11.59

Red dashed line = mean

Exam Scores — Box Plot

5-number summary + outliers

Extracurricular Activity Participation

Extracurricular Participation — Bar Chart

Count and percentage of students

Participation — Pie Chart

Mental Health Rating Distribution

Mean = 6.8 | Median = 6.9 | SD = 1.92 | Scale: 1 (poor) to 10 (excellent)

Darker bars = higher frequency

Daily Sleep Hours

Distribution of Sleep Hours

Mean = 7.02 | Median = 7 | SD = 1.47 | Under 7 hrs: 48.7 %

Orange dashed lines = recommended range (7–9 hrs)

Sleep Hours — Box Plot

Section B: Bivariate Analysis

Questions 6–10 | Examining relationships between two variables

Study Hours per Day vs. Exam Score

Positive relationship: more study hours -> higher exam scores

Shaded band = 95% confidence interval

Exam Scores by Part-Time Job Status

Comparing academic performance between employed and non-employed students

Diamond = group mean

Mental Health Rating vs. Exam Score

Mental Health Rating vs. Exam Score

Scatterplot with linear regression line

Shaded band = 95% confidence interval

Mean Exam Score per Mental Health Rating

Average score at each rating level (1-10)

Social Media Hours vs. Exam Score

Social Media Hours vs. Exam Score

Negative relationship expected: more social media → lower scores

Mean Exam Score by Social Media Usage

Binned daily social media hours

Diet Quality vs. Attendance & Exam Score

Diet Quality vs. Mean Attendance

Higher diet quality → better class attendance

Error bars = ± 1 SD

Exam Score by Diet Quality

Better diet quality → higher exam scores

Diamond = group mean
